

HisabDo AI – FAQ Assistant Planning

AI Research / Data Engineering Documentation

Prepared for: AI/ML Team

Role: AI Research/Data Engineer – Nobita

Document purpose: Define the research, data preparation, testing, evaluation, financial-insight requirements, and documentation workflow for HisabDo AI initiatives.

Figure 1. End-to-end workflow for HisabDo AI research, FAQ preparation, testing, evaluation, and handover.

1. Objective

The objective is to prepare reliable AI-ready information and evaluation assets for HisabDo. The work focuses on understanding the product, identifying useful AI use cases, preparing a structured FAQ dataset, creating realistic test questions, defining financial insight requirements, evaluating AI responses, and documenting findings for the development team.

2. Role Responsibilities

Area	Main Responsibility
HisabDo Use Cases	Research practical areas where AI can improve the user experience.
AI Recommendations	Identify useful recommendation and assistance scenarios.
Financial Insights	Define what financial data is required and what insights AI should produce.
FAQ Dataset	Prepare accurate, structured questions and verified answers.
Test Questions	Create realistic questions and variations to test AI understanding.
AI Evaluation	Define evaluation criteria and record response quality.
Documentation	Maintain datasets, requirements, results, issues, and handover notes.

3. End-to-End Workflow

1. Research & Understand HisabDo

Study product features, modules, users, existing documentation, and common user questions.

2. Identify AI Use Cases

List and prioritize FAQ, recommendation, financial-insight, explanation, and search opportunities.

3. Plan FAQ Categories

Define categories and subcategories so the FAQ dataset remains organized and searchable.

4. Prepare FAQ Dataset

Create verified question-answer records with category, keywords/tags, and source information where available.

5. Create Test Questions

Create direct questions, paraphrases, incomplete questions, and realistic user variations.

6. Define Financial Insights

Specify required data, calculation/logic, expected insight, and safe response behavior.

7. Define Evaluation Framework

Set criteria, scoring, test cases, pass/fail rules, and hallucination checks.

8. Test & Evaluate

Run the test set, record responses, identify failures, and improve data/prompts/requirements.

9. Documentation & Handover

Package datasets, requirements, evaluation results, known limitations, and recommendations.

4. FAQ Dataset Design

Recommended initial structure:

Field	Purpose	Example
FAQ ID	Unique identifier	FAQ-001
Category	Main topic	Invoices
Question	Canonical user question	How do I create an invoice?
Answer	Verified product answer	Use the Invoices section...
Keywords	Search/semantic hints	invoice, bill, customer
Question Variations	Alternative wording	How can I make a bill?
Source	Where answer was verified	Product/docs/team
Status	Review state	Draft / Verified

Suggested FAQ categories

Account & Login • Profile & Settings • Customers • Invoices • Expenses • Reports • Payments • Subscription • General Product Questions

Data quality rule: Answers must be verified from the actual HisabDo product, approved documentation, or a responsible team member. Do not invent product behavior merely to fill the dataset.

5. Test Question Strategy

Test Type	Example
Direct	How do I create an invoice?
Paraphrase	Where can I make a new invoice?
Conversational	I need to bill a customer. What should I do?
Short/Incomplete	Create invoice?
Keyword variation	How can I generate a bill?
Out-of-scope	Who won yesterday's cricket match?
Potentially ambiguous	How do I change it?

6. Financial Insight Requirements

Each proposed financial insight should be documented using the pattern: **Required Data** → **Logic/Calculation** → **Expected AI Output** → **Safety/Limitations**.

Insight	Required Data	Expected Output
Expense Increase	Current and previous period expenses; categories	Explain the change and identify major contributors.
Unpaid Invoices	Invoice status, due date, amount	Summarize outstanding amounts and overdue items.
Sales Trend	Sales totals by period/category	Describe increases, decreases, and notable trends.
Cash-Flow Warning	Income, expenses, receivables, payables	Highlight potential cash-flow pressure using available data.
Expense Recommendation	Expense categories and historical trends	Suggest areas worth reviewing, without making unsupported financial o

7. AI Evaluation Framework

Criterion	What to Check
Correctness	Does the response match the verified HisabDo information?
Relevance	Does it directly address the user's question?
Completeness	Does it provide the necessary steps/information?
Clarity	Is it easy for a normal user to understand?
Groundedness	Is the answer supported by the available FAQ/product data?
Hallucination	Did the AI invent features, policies, prices, or procedures?
Safety	Does it avoid unsupported financial conclusions or risky claims?

Suggested scoring

Use a simple 0–2 scale for each criterion: **0 = Fail**, **1 = Partially acceptable**, **2 = Good**. Record the score, issue, expected answer, actual answer, and recommended fix for every failed or partial test.

8. Evaluation Record Template

Test ID	Question	Expected	AI Response	Score	Issue/Fix
T-001	How do I create an invoice?	Verified invoice steps	Record response	0–2	Record if incorrect
T-002	Where can I make a bill?	Same intent as T-001	Record response	0–2	Check intent handling
T-003	Unsupported question	Safe fallback	Record response	0–2	Check hallucination

9. Deliverables

- HisabDo AI use-case document
- FAQ category structure
- Verified FAQ dataset (CSV/Excel/JSON as agreed with the team)
- FAQ question variations/test-question dataset
- Financial insight requirements document
- AI evaluation criteria and test cases
- Evaluation results and issue log
- Final documentation and development-team handover

10. Recommended Day 16 Execution Plan

Phase	Work	Output
1	Collect/verify HisabDo feature information	Product notes
2	Define FAQ categories	Category list
3	Collect initial FAQs	Raw FAQ list
4	Convert into structured dataset	FAQ dataset
5	Create question variations	Test set
6	Define evaluation criteria	Evaluation sheet
7	Review with team	Approved/revised dataset

11. Final Workflow

Research HisabDo → Identify AI Use Cases → Plan FAQ Categories → Prepare FAQ Dataset → Create Test Questions → Define Financial Insights → Define Evaluation → Test AI → Evaluate & Improve → Document → Handover

Key principle: **Accurate data first, realistic testing second, evaluation third, continuous improvement throughout.**

Note: Product-specific answers, feature names, workflows, pricing, and financial rules should be verified against current HisabDo product information before being added to the final production FAQ dataset.
